Brooklyn, NY

Technical Skills

Languages	TypeScript, JavaScript, Python, PHP
Frontend	React, Next.js, Three.js, HTML, CSS
Backend & APIs	gRPC, Node.js, Express, GraphQL, Protocol Buffers
AI & Workflow Orchestration	LangGraph, LLM application integration
Database & Storage	PostgreSQL, MySQL, Redis
Infrastructure	GCP, Docker, Kubernetes, Terraform

Work Experience

Senior Software Engineer Oct 2025 – Current

Foundation EGI – Remote, NY

- Develop interactive 3D modeling and technical-drawing interfaces for an AI-powered CAD processing product.
- Build Python backend services and LangGraph-based workflows that integrate machine learning and geometry-processing capabilities into end-user features.
- Design application data structures and service interfaces across the frontend and backend, while contributing to production reliability, observability, and performance.
- Built internal tooling for batch labeling of engineering models, generating structured datasets for machine learning model training and tuning.

Senior Software Engineer Jan 2023 – Sept 2025

Mercari – Palo Alto, CA

- Led and delivered cross-functional improvements to key web application flows, focusing on maintainability and development efficiency.
- Developed and maintained a shared design system with 30+ components used across web applications, improving UI consistency and collaboration between engineering and design.

Software Engineer July 2018 – Jan 2023

Mercari – Palo Alto, CA

- Developed customer-facing marketplace features using React and Next.js, integrating with backend services through GraphQL.
- Contributed to the migration of more than 20 pages from a legacy PHP application to a modern web stack, improving maintainability and development velocity.
- Expanded end-to-end test coverage for critical user journeys using Cypress.

Education

University of California, Berkeley Dec 2017

B.A. Computer Science

Projects

Local News Project April 2020

- Build web frontend in React for users to view local news articles from online publications with a focus on Public Health using Google Location APIs and a backend REST API
- Maintain a moderation platform used to validate news articles crawled by the ML model
